

EVERSCALE ACADEMY

Team work

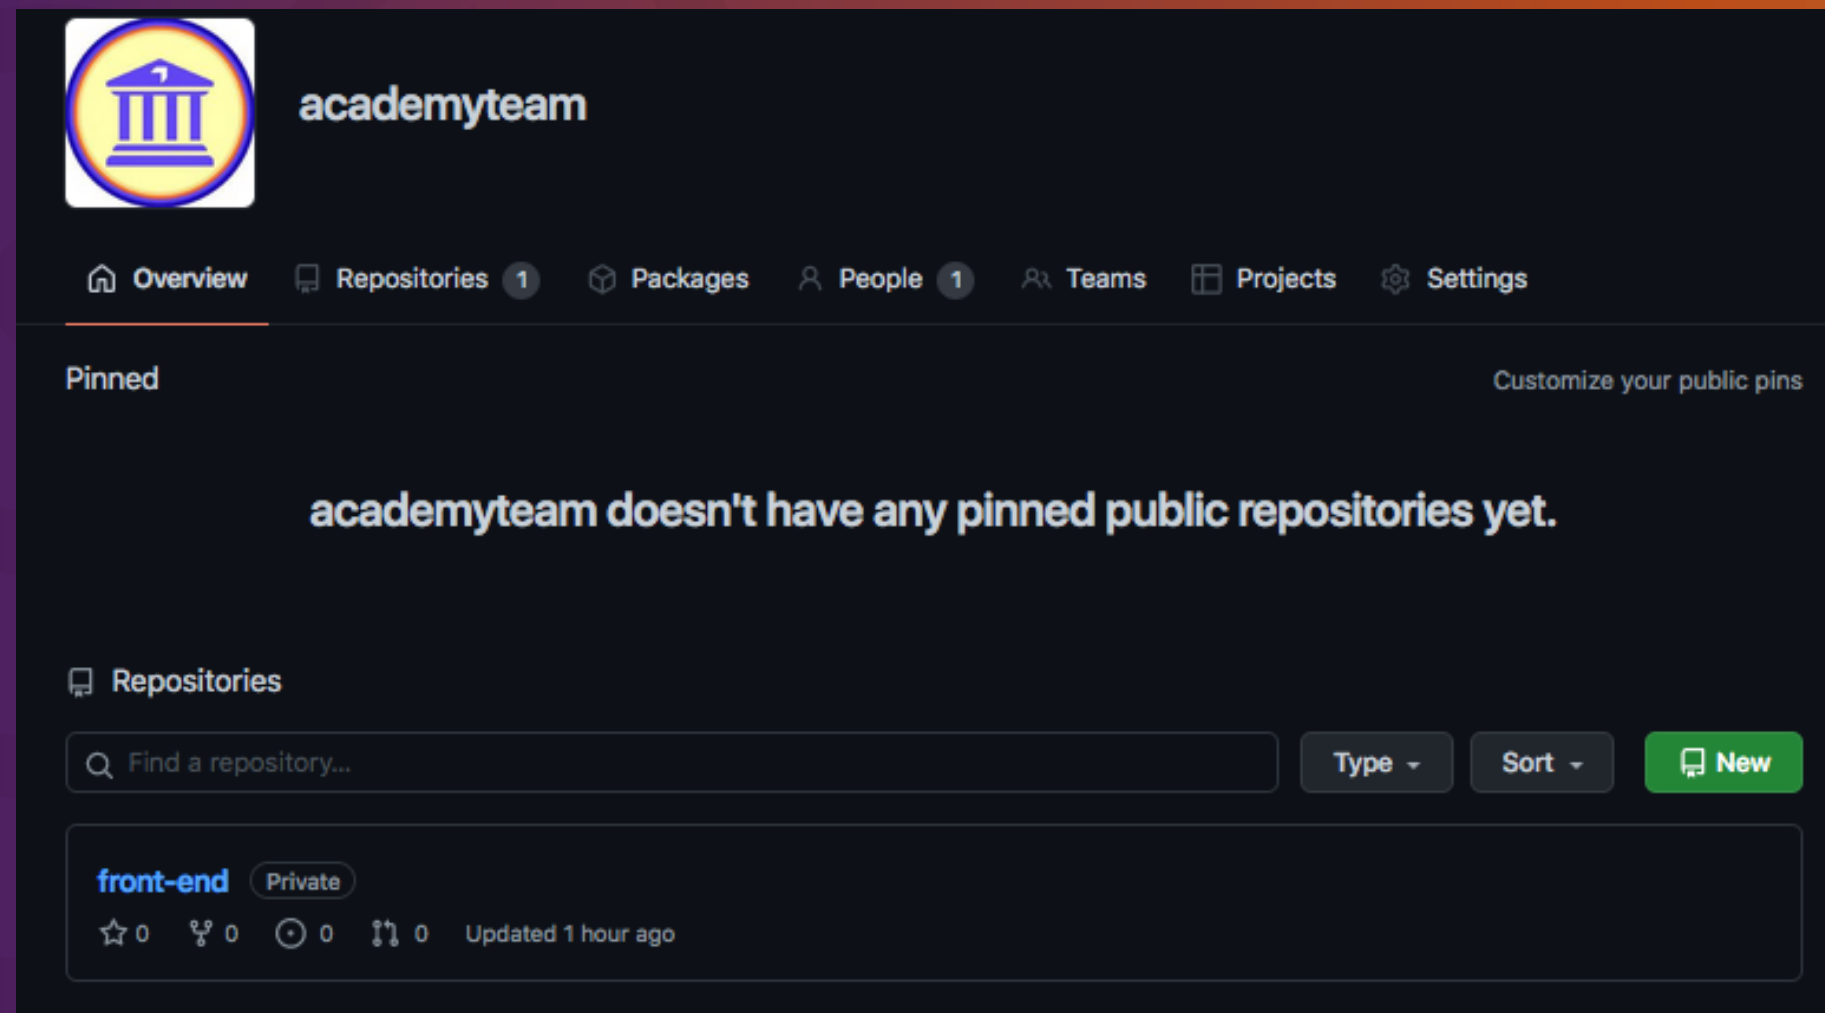

academyteam

GitHub is where academyteam builds software.

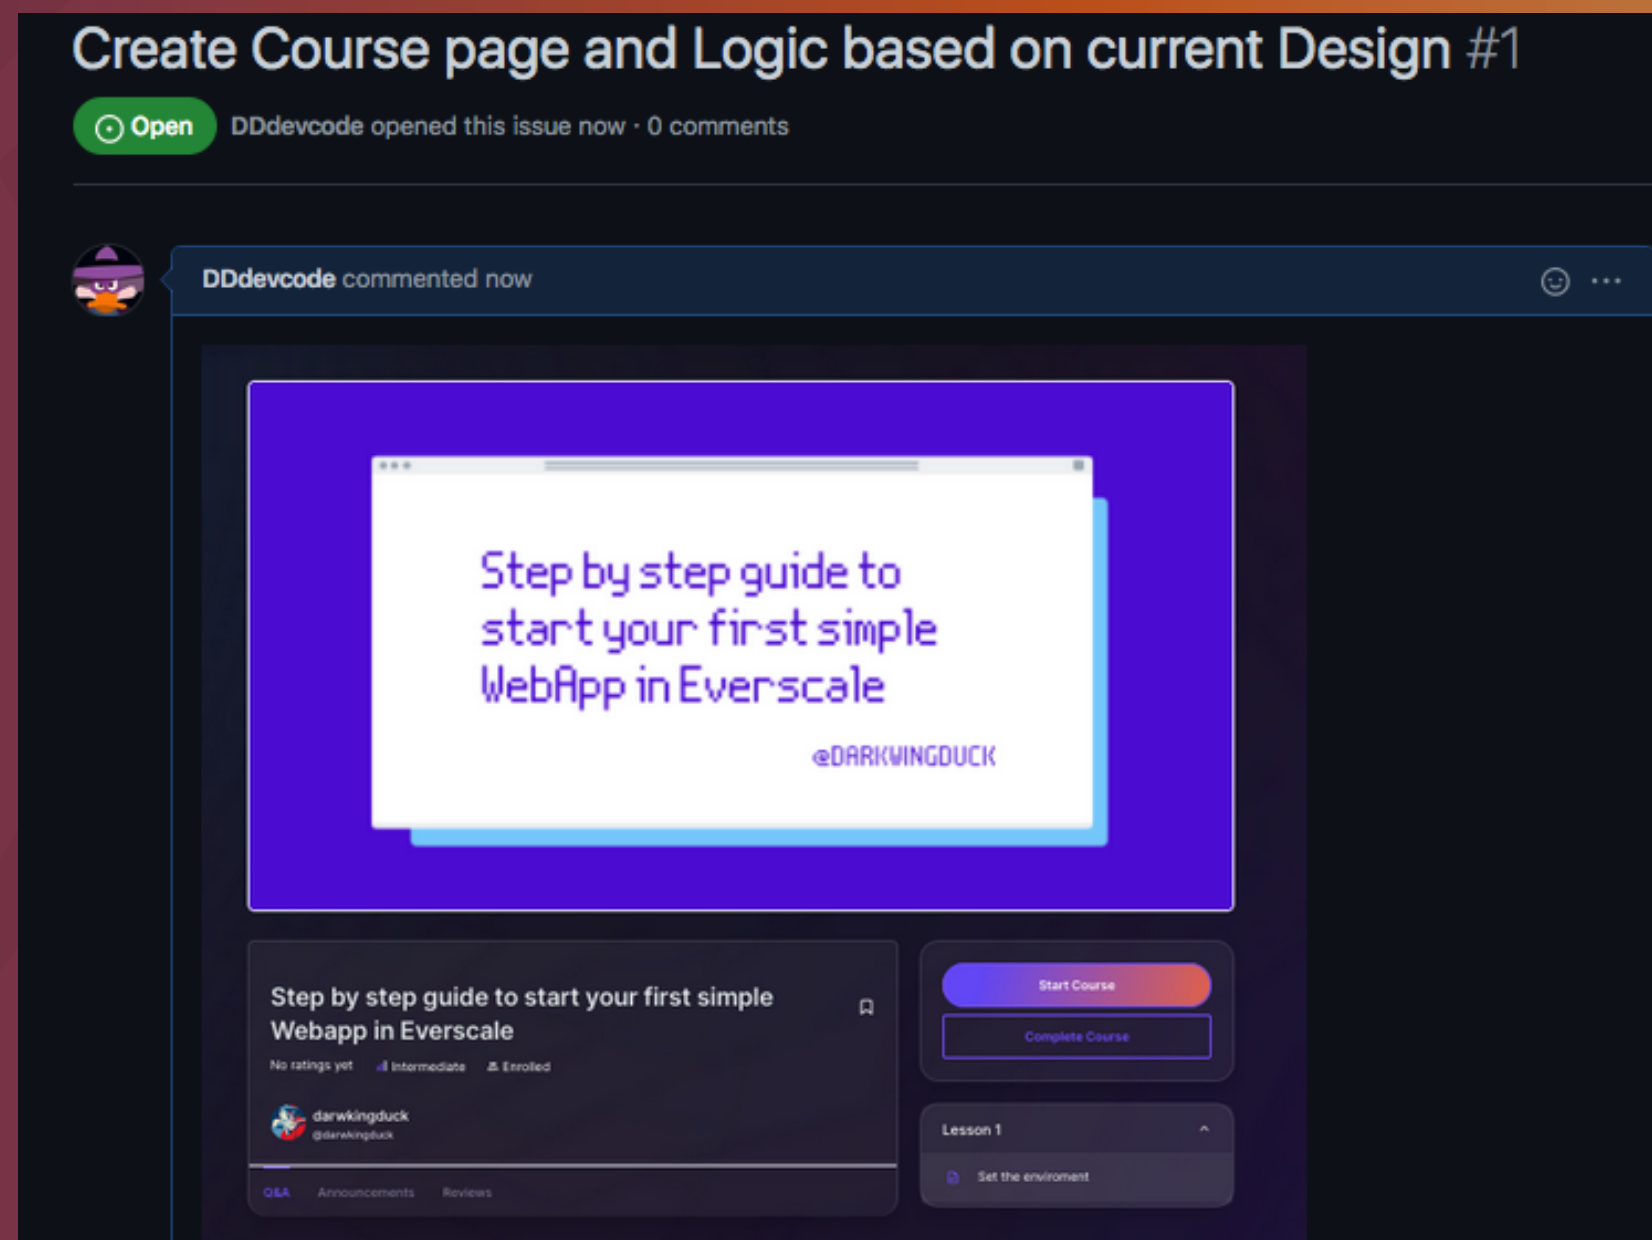

How it will works (step by step)

Now we have a team repository

Here we will create issues

For example

Work algorithm

1. Dev Team Lead create the issue and assign to one of devs and set the price in Academy tokens for this task
2. Team Dev Member take this task to do and start implementing it
3. TDM or DTL create new branch with this task for example - "1-create-course page"
4. After TDM finish his task he make "push" to his branch.
5. DTL review his changes and check that everything is work and mark that issue is solved.
6. What happened next on next page.

Calculation of rewards/payments

1. We set that one token is 1\$ - > salary of Junior Developer 1000\$ -> 25\$ for 1 hour.
2. This task is needed 5 hours to implement -> 125\$ -> 125 Academy Tokens
3. 20% of get the DTL for managing tasks(Create/Check/Send for correction to TDM)
4. Finally after task is done, TDM get 125 ACADEMY and TDL get 25 ACADEMY
5. But how for example TDM can exchange his token for cash? Let's see next slide:)

Exchange tokens

1. At the end of every month (maybe 2-3 months), everybody decides what they want to do with their token
 - a. First option: you can save your tokens and exchange later, for example when the token price will be bigger? Interesting, yes? Work and earn more!
 - b. Second option: you can sell your token. You expose the entire volume that you have accumulated over the month to the exchange, for example for 1\$ and we bought you tokens for this price.
2. For example, you earn about 1000 ACADEMY, so you go to the exchange and investors bought your tokens
